

Week of 2/4

Words of the Week
sediment, break, landform,
capacity, familiar

Important Dates:

2/4: Kids Heart Challenge
Assembly 8:15-8:45

2/6 Early Release

2/8 Natural Leaders assembly

2/14 PBIS DAY and Valentines
Day party (party at 2:15 pm)

Reading

Due to the weather and cancellations, we are finishing reading testing this week. However, we are jumping back into reading groups and starting our new class novel with a big focus on fluency.

Writing

Students are drafting their persuasive pieces and learning how to produce answers to counterarguments in their writing.

Science

Last week we conducted our first experiment and looked at different components that make up soil. This week we will be doing investigations and experiments about types of physical weathering on granite and conglomerate rocks. We are talking about how this process relates to different landforms as well. Ask your students what they have discovered about soil so far!

MATH

We are finishing up our Unit by analyzing data and working with more measurement and unit conversions. We are also working with maximum, minimum, and range. This week, look in your student's assignment notebook for the date of their unit 4 test. We will be sending home a study guide. We will also have IXL practice options in their assignment notebook on days there is no Home Connection.
